

FreeMax

Versatile Elegance

The FreeMax was built for high density storage without having to go with a two tier system.

High Density with Low Ceilings?

Sure, we can do that! The unique offsetting design of the FreeMax allows bikes to sit 13” apart for high density storage without needing to use two tiered racking.

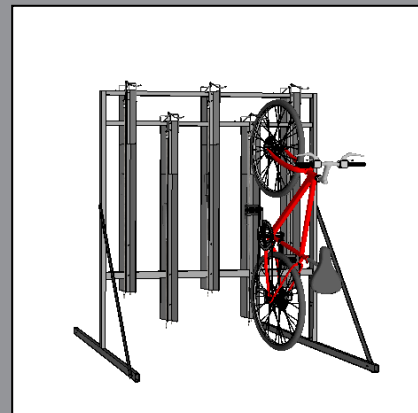

The FreeMax utilizes our WallMax wall hanging rack design. This holds most tire sizes in an intuitive and easy to use design.

Optional security cables ensure that users will have an easy way to lock their bikes.

We recommend utilizing this rack in rooms where a two tiered system and wall mounted racking is not an option. The FreeMax allows for bikes on just one side of the rack, or for the highest density, bikes on both sides.

This rack can be used in combination with the “WallMax” to provide a clean consistent look throughout your bike room.

Please contact us for a dealer near you. Our dealers can assist with measuring, space recommendations, floor plans, and installation.

FreeMax:

- 7' Ceiling height required
