

Cycle Storage Solutions Recyclable Materials Statement

Cycle Storage Solutions and our parent company, Rudy Rack, are committed to ensuring our products and methods of manufacturing are environmental responsible. We manufacture all of our racking from steel, which is a fully recyclable material.

Steel:

We keep our materials as local as possible. Based out of Wisconsin, the farthest our steel travels to get to us is 200 miles, from Central Steel in Chicago. The average recycled content of the steel that goes into our racking falls in a range between 20% and 97% (please see attached document for verification).

BOF Steel:

Total Recycled Content:	36.9%
Post-Consumer Recycled Content:	19.8%
Pre-Consumer Recycled Content:	14.4%

EAF Steel:

Total Recycled Content:	89.89%
Post-Consumer Recycled Content	69.0%
Pre-Consumer Recycled Content	19.5%

The majority of our products use mostly BOF Steel in the form of steel tubing. If you have any questions, please feel free to give us a call.
